StateRAMP Overview

SPRING 2022

stateramp.org
Verification of vendor cybersecurity is a requirement in the federal system. Through the creation of Federal Risk and Authorization Management Program (FedRAMP), the federal government requires all service providers to meet their cyber policies by independent 3rd party verification. FedRAMP Authorization is only eligible for providers doing business with the federal government, eliminating it as a source for common verification for state and local government and their providers.

StateRAMP provides a common standard for state and local governments and a shared model for state and local governments to validate their contractors have appropriate security and data controls in place.

The National Association of State Chief Information Officers (NASCIO) listed cybersecurity and managing third party risk as their #1 2022 priority for the 9th consecutive year. StateRAMP was created to assist state and local governments in managing the third-party risk with service providers.
What is StateRAMP?

In 2020, a Steering Committee comprised of dozens of current and former State Chief Information Officers, Chief Information Security Officers, Procurement and Privacy Officials joined private industry leaders and cyber assessing organizations to charter StateRAMP.

StateRAMP brings state and local governments together to develop standards for cloud security, educate on best practices, and recognize a common method for verifying the cloud security of service providers who use or offer cloud solutions that process, store, and/or transmit government required data, including personally identifiable information (PII), personal health information (PHI) and payment card industry (PCI) information.

StateRAMP launched in 2021 and is organized as a 501c6 non-profit organization, governed by a majority of state and local government officials, with minority representation from private industry and subject matter experts.

Like FedRAMP, StateRAMP’s process for verification relies on FedRAMP Authorized Third Party Assessing Organizations (3PAOs) to conduct independent audits and assessments. The requirements are built on the widely accepted National Institute of Standards and Technology (NIST) Special Publication 800-53 Rev. 4 framework, soon to be Rev. 5.

With StateRAMP, Procurement Officials, Privacy Officers, and Information Security Officers can be confident in knowing government-selected service providers meet and maintain published cybersecurity policies.

Secure service providers have the ability to grow their government business at scale through transferrable cybersecurity verifications published on StateRAMP’s Approved Vendor List.

StateRAMP formalizes processes that allow third party assessment organizations to validate IaaS, SaaS, and PaaS solutions to ensure service providers meet government-published cybersecurity policies.

StateRAMP creates a framework that can be implemented by procurement and security officials for continuous improvement in cybersecurity for state & local governments, providers, and the constituents they serve.

- Shared Services Model for States and Local Government
- “Verify Once, Use Many” Approach for Providers
- Centralized Resources for Government & Providers
- Path for Procurement to Verify Controls Required
- Ongoing Commitment to Education and Best Practice
- State and Local Government Led Governance and Collaboration
1. The process begins with a state or local government adopting a cyber policy that requires independent verification of their vendor’s cyber posture and may be verified by StateRAMP.

2. Providers who wish to do business with that state or local government engage a Third Party Assessing Organization (3PAO) for the required assessments. Any FedRAMP 3PAO is eligible to conduct the assessments but must register with StateRAMP.

3. The 3PAO conducts a Readiness Assessment Report or Security Assessment Report and submits the security package to StateRAMP.

4. StateRAMP manages the Program Management Office (PMO), whose security professionals review the security package and verifies security status based on the policies adopted by the StateRAMP Board. The StateRAMP PMO also maintains responsibility for continuous monitoring.

5. StateRAMP publishes and maintains a publicly available Authorized Vendor List (AVL) on stateramp.org that includes information about the service providers’ products, including impact level, provider type, and security status.
Once a government or service provider has made the decision to verify cloud security with StateRAMP, the first step is to identify at which impact level.

StateRAMP recognizes the following impact levels, including:

1. **STATERAMP LOW**
   StateRAMP Low baseline controls align with NIST and generally map to data or systems that involve publicly available data.

2. **STATERAMP LOW+**
   StateRAMP Low+ baseline controls include all of StateRAMP Low controls plus a few Moderate Impact Level controls.

3. **STATERAMP MODERATE**
   StateRAMP Moderate baseline controls align with NIST and generally map to data or systems that involve confidential data or of high criticality to the continuity of government.

4. **STATERAMP HIGH**
   StateRAMP High aligns with FedRAMP High baseline controls and is utilized for the most sensitive and critical systems for the highest level of security.

The StateRAMP Data Classification Tool is available for government and procurement officials and service providers to help guide impact level selection. View the Data Classification Tool at [www.stateramp.org/documents](http://www.stateramp.org/documents).
There are three milestone statuses recognized by StateRAMP that include: Ready, Authorized and Provisional. Ready does not require a Government Sponsor. Authorized and Provisional statuses require a Government Sponsor.

STATUS PROGRESSION

*Provisional and Authorized statuses require a government sponsorship. The StateRAMP Approvals Committee may serve as the Government Sponsor for products seeking authorization.
READY is a status that is attained by meeting the Minimum Mandatory Requirements demonstrated by a Readiness Assessment Report that is conducted by a Third Party Assessing Organization (3PAO). No contract or government sponsor is required for Ready Status. A provider that is StateRAMP Ready indicates this is an offering that meets the minimum requirements and is likely well positioned to be able to comply with the full authorization requirements.

StateRAMP will provide proactive education, sample policies & resources for its members. The goal with documentation is to provide clear guidance with a focus on intent and purpose. An example StateRAMP’s approach can be found in the published Minimum Mandatory Requirements for Ready status, which are available at www.stateramp.org/documents.

AUTHORIZED is a status that indicates the product or offering meets all the required NIST controls by impact level and the provider has completed the necessary documentation, including a 3PAO Security Assessment Report. A government sponsor is required to be listed as Authorized or Provisional.

To be Authorized, both the StateRAMP PMO and “sponsoring government” must agree the product meets the requirements to listed as Authorized. Note: You do not need to be “Ready” before “Authorized.” These steps for security statuses are provided as options.

If there is a provider who meets the minimum requirements and most critical controls, but not all, a Sponsoring Government may choose to list the status as PROVISIONAL. The goal would be for the provider listed with a Provisional Status to work toward Authorized.

There are fees for reviewing security packages that are paid by the service provider to the StateRAMP Program Management Office (PMO) based on the security status listing that is being requested, including: $2,500 for a Ready Review, $5,000 for a Security Assessment Review, and $5,000 annually for Continuous Monitoring to maintain the listing.
For a vendor’s offering to be listed as StateRAMP Authorized on StateRAMP’s Authorized Vendor List (AVL), a government sponsor is required. Eligible government sponsors include: Any SLED (state, local, education, tribal/territorial) government official or employee with responsibility for information security may serve as a government sponsor.

**Government sponsors agree to the following:**

**INITIAL AUTHORIZATION REVIEW**

- Review the StateRAMP Program Management Office’s (PMO) summary and recommendation of the service provider’s security package submission.
- Make a recommendation to approve or deny authorization status. If an authorization status is denied and the provider’s offering meets the minimum mandatory requirements, the sponsor may recommend Provisional status.

**ONGOING**

- Review and respond to the Program Management Office’s (PMO) summary and recommendations for remediation as necessary.

**ANNUALLY**

- Review the StateRAMP PMO’s summary and recommendation of the service provider’s annual audit for continued authorization status.
- Make a recommendation to approve or deny continued authorization status.
StateRAMP has developed a fast-track process for products or offerings with a FedRAMP authorization to be listed on StateRAMP’s Authorized Vendor List (AVL). The fast-track process does not require an additional audit. However, providers will need to work with the StateRAMP Program Management Office (PMO) to authenticate and provide documentation in a way that is usable by state and local governments. Additionally, the PMO will provide options to assist with the transfer of FedRAMP documentation to StateRAMP templates. Whether a provider has a FedRAMP ATO, the fees are the same for the PMO review, which include a Ready Review fee of $2500, an Authorization Review Fee of $5000 and then ongoing, annually $5000 for Continuous Monitoring.

The StateRAMP Fast Track only applies to offerings that have a FedRAMP Ready, ATO or P-ATO status. If a provider has multiple offerings, including some that are FedRAMP Authorized and some that are not, the process for StateRAMP Fast Track only applies for the offerings with a FedRAMP authorization. For offerings without a FedRAMP authorization, providers will need to engage a Third Party Assessment Organization for an audit.

**ACCEPTED FEDRAMP STATUS**
- FedRAMP Ready
- FedRAMP ATO
- FedRAMP P-ATO

**REQUIRED DOCUMENTATION**
- Security Packet as submitted and approved by FedRAMP
- Prior 90 days of Continuous Monitoring
- *StateRAMP Templates required

**PMO REVIEW**
- Call to Review Boundary and Architecture
- Review Submission
- Review Fee
To maintain a listing of Ready, Authorized or Provisional, the provider must comply with the Continuous Monitoring requirements, which can be found in the Continuous Monitoring Guide, published on www.stateramp.org/documents.

Continuous monitoring activity is centralized through the StateRAMP Program Management Office (PMO). This centralization gives service providers and governments a single point of reference. Additionally, having the PMO involved in all status reviews and in continuous monitoring ensures consistent application of standards.

StateRAMP Certified Members, who include any state or agency that requires StateRAMP verification and who has a membership agreement with StateRAMP, must assign an authorized security official to receive an account in the StateRAMP PMO secure portal to view continuous monitoring reporting for all StateRAMP listed providers with whom the state/agency has a contract, so long as the provider(s) consents. The authorized security official will also receive notification when a breach or problem arises from the StateRAMP PMO.

**STATERAMP & PROCUREMENT PROCESS**

StateRAMP has emphasized the need to give sufficient time for providers to attain a listing of Ready or Authorized. Some states or local governments may wish to require a provider’s product be listed as StateRAMP Ready at the time of executing a contract for services. Then, they may require the provider’s product be StateRAMP Authorized within 12 months of contract initiation.

See an example of how a state or agency may incorporate StateRAMP/cloud security requirements into the procurement process:
StateRAMP is a membership organization, with membership options for both governments and private industry.

**GOVERNMENT MEMBERS**

**Individuals**

Any SLED (state, local, education, tribal/territorial) government official or employee with responsibility for information security, information technology, privacy and/or procurement may become a member of StateRAMP. There is no fee to join. Members may join by emailing the Executive Director to indicate their interest (leah@stateramp.org) or completing a form at www.stateramp.org.

**States & Agencies**

States or Agencies interested in becoming a StateRAMP Certified Member at the agency or enterprise level should contact Leah McGrath at leah@stateramp.org.

**SERVICE PROVIDERS**

Service Providers and supporting organizations may join StateRAMP as a Subscriber Member for a membership fee of $500. Membership provides access to templates and resources, and the ability to list verified cloud products on the StateRAMP Authorized Vendor List (AVL). To list products on the StateRAMP Authorized Vendor List (AVL), the products must meet verification requirements that are adopted by the Board of Directors and recommended by the Standards and Technical Committee.
